

Textured Lighting

Textured Lighting adds thematic patterns and designs (for example, stars, snowflakes, and leaves) that can be projected onto any surface to add an added layer and detail to the lighting design, interest and elevate the event environment to the next level.

Recommended Strategies

- Amora can custom order standard-size lighting gobos with client logo or event-specific branding and project them onto the space being used
- For a more budget-friendly option, clients can use stock image gobos available from Amora Event Group, or order a custom steel gobo for more simple logos and textures.
