

Martin MAC Aura XB: moving lights with a more compact profile than the Martin Rush MH1 movers. The MAC Aura XBs feature an adjustable zoom which allows the beam size to be changed from 9.0° to 59.1° even after the fixture has been rigged. Unlike the Martin Rush MH1 Movers, they do *not* have built-in gobo shapes, but do support custom color mixing, with the zoom effect allowing each light to be used with more versatility as either a wide Stage/Room Wash, or a narrow spotlight-style beam (which can also be used for engaging movement effects). They also feature a backlit “Aura,” which can imitate a colorful shimmering effect on the fixture itself.
