

Room Wash

Implementing a **Room Wash** will create a diffused, broad color fill of an entire space to make the whole atmosphere pop. This differs from up lighting in the sense that the conical light beam created by up lights can still be seen behind the lounge furniture along the walls and drape, while the soft blended colors seen on the lounge grouping itself was created with a Room Wash.

How it Works

Create a Room Wash by using light fixtures attached to rigging points overhead. Similar to up lighting, a Room Wash can also be programmed to be dimmable, or transition between different colors throughout an event. A Room Wash can be achieved using standard up lights, Titan Tubes, or MAC Aura XBs. Please see the “Titan Tubes,” and “MAC Aura XB,” sections for more details on each of these fixture types. The MAC Aura XBs offer the most flexibility for control and position adjustment with a softer wide angle beam edge.
